

Coding with

Angry Birds!

Can you write the code and complete the challenges?

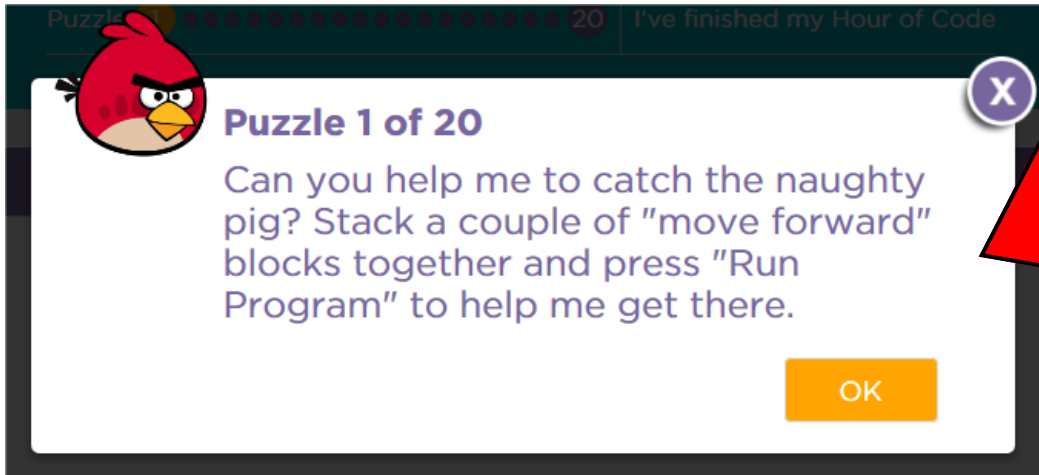

Solve these coding puzzles!

<http://learn.code.org/hoc/1>

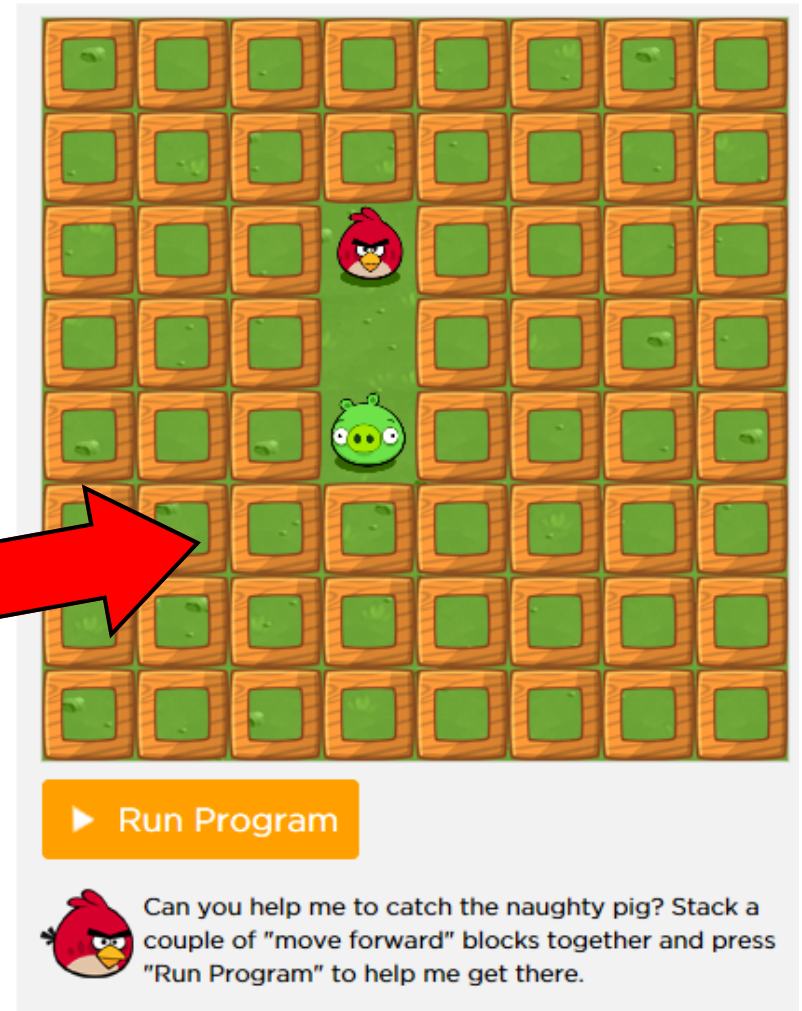

It looks easy but things do get harder!

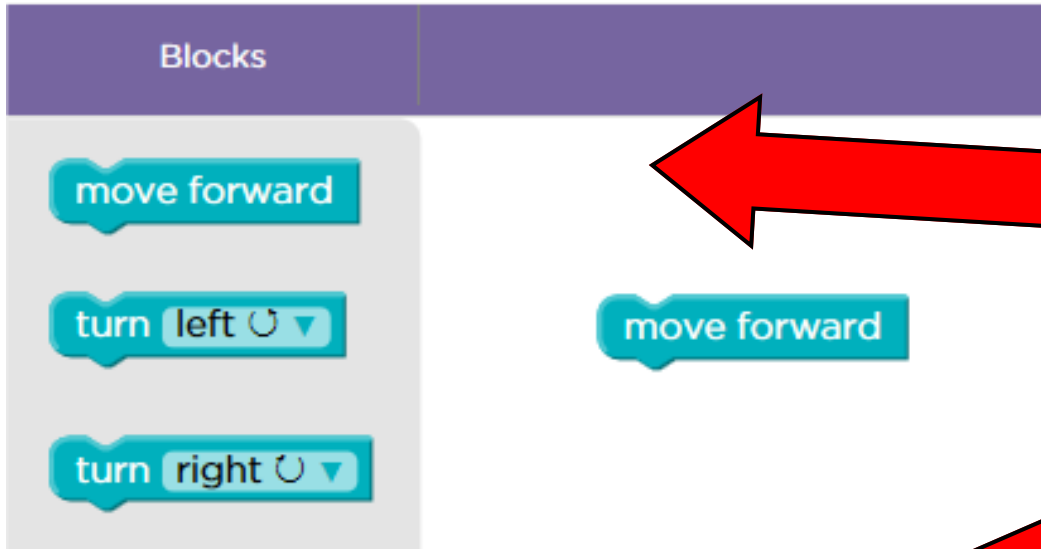

Each puzzle explains what you need to do!

You will see the maze and the instructions along with your Angry Bird and the Naughty Pig.

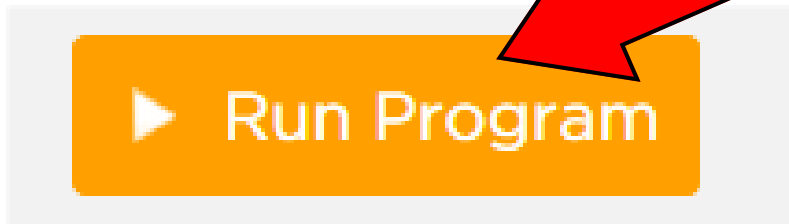

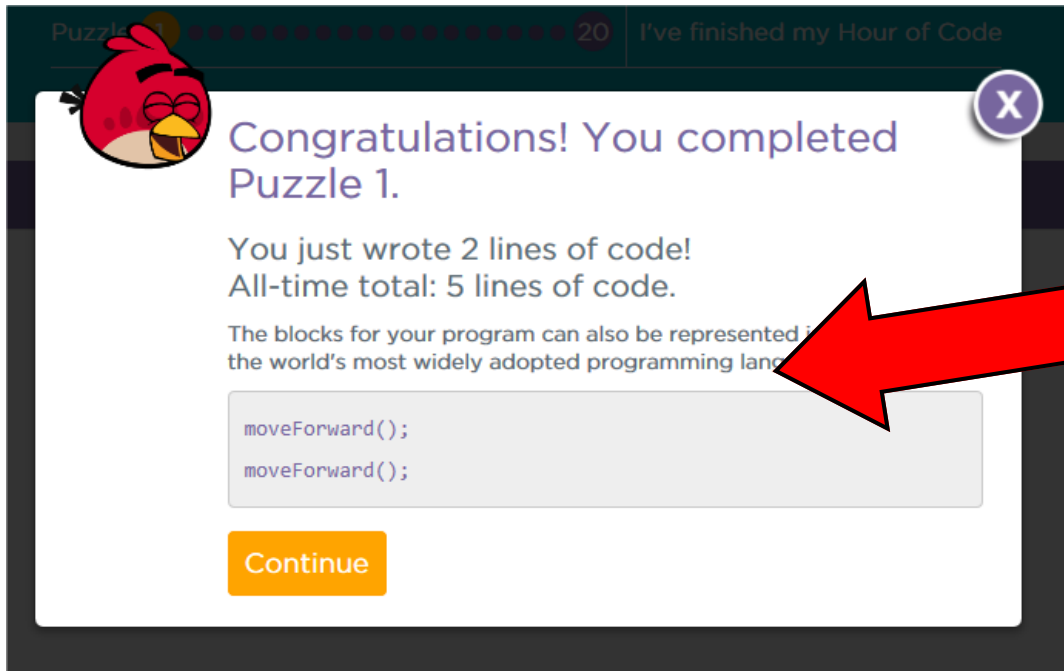

On the right of the screen is the programming area. Drag commands from the BLOCKS area and drop them into place under each other.

Once you have put your program code together in a list you can run it!

Just click the *Run Program* button!

If you have got it right you should a message like this appear.

If not then just have another go!

The puzzles do get harder and harder so good luck!
